

**X-Treme Toyz Tech: Daystar Poly Winch Fairlead Rollers #KU70054BK & Hook Isolator #KU70039BK**

**"ROLLIN' EASY"**

If you own a winch and are using the lighter, Poly Style Rope, you've been forced to use an aluminum "hawse" style fairlead to protect your rope investment. The drawback with the aluminum style hawse fairlead is this; while the surface is certainly smoother than the steel version, the rope still drags across the surface.

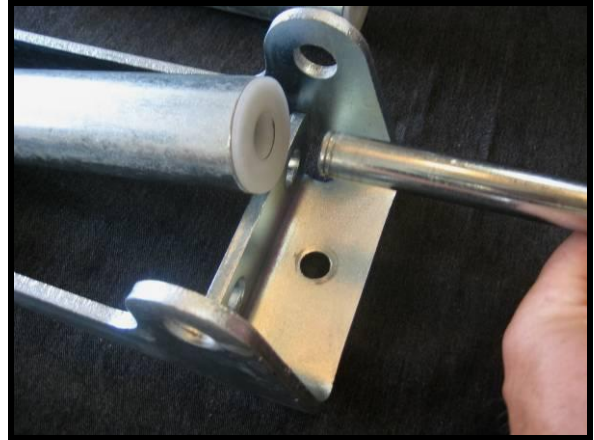

Daystar products saw this issue and came up with an inexpensive, easy to install fix, the "Poly Winch Roller". The roller kit comes with everything needed to replace the factory steel rollers in a roller fairlead with premium polyurethane units that hold allow the rope to roll across the surface as well as operate at more severe angles. Daystar also makes a slick poly cable & hook isolator (shown in last photo) that protects the poly rollers from damage. So, follow along as we install a set on a standard roller fairlead.

**The Daystar Kit comes with 2 vertical & 2 horizontal replacement rollers.**

**Remove the snap ring @ one end of each roller to remove the steel rollers.**

**Retain the factory shafts and retaining clips.**

**Install the Daystar Rollers with the factory shafts and retaining clips.**

**Daystar also makes a cable & hook isolator to further protect your investment.**
